

Start Here: The V FOODS Learning Path

Welcome to V FOODS! This folder is organized as a step-by-step learning guide for anyone completely new to this project. By reading these short guides in order, you will understand how the entire system works from top to bottom, even if you have zero technical background.

V FOODS is a campus food pre-ordering and digital wallet app built specifically for college canteens and food stalls. It is strictly pickup-only (no food delivery drivers), operates entirely on a prepaid digital campus wallet, and serves four distinct types of users: students ordering meals, kitchen cooks preparing food, canteen owners running stalls, and university administrators overseeing campus dining.

Reading Note: Read these guides in order from 01 to 08. Each document builds on the previous one. Do not skip ahead if you are new to the project.

 **Looking for a single shareable guide or printable PDF? -**

V_FOODS_COMPLETE_SYSTEM_GUIDE.md: Master document with complete system architecture diagrams. - **V_FOODS_SYSTEM_GUIDE.pdf:** Standalone 4-page executive PDF whitepaper for sharing with judges, professors, and partners. - **V_FOODS_SYSTEM_GUIDE.html:** Clean browser-printable view.

The Reading Order

Every document is available as both Markdown (`.md`) and a standalone printable PDF (`.pdf`) in this folder:

1. **01-what-is-vfoods.md** (PDF Version): The core idea of V FOODS, the campus problem it solves, and why it is built differently from commercial delivery apps.
2. **02-the-four-roles.md** (PDF Version): Who uses the system (Students, Kitchen Staff, Canteen Owners, Super Admins) and what each role can see and do.
3. **03-how-an-order-works.md** (PDF Version): The complete lifecycle of an order from adding items to kitchen preparation and QR-verified counter pickup.
4. **04-the-database.md** (PDF Version): What information the database stores, how stalls are connected, and how built-in security rules keep data safe.
5. **05-tools-used.md** (PDF Version): The software, services, and tools powering the application, explained in plain English without jargon.
6. **06-features.md** (PDF Version): A catalog of all active features (reordering, ratings, group carts, scheduled slots, coupons) and retired experiments.
7. **07-payments-phonepe.md** (PDF Version): A deep dive into the wallet-first model, how PhonePe handles top-ups safely, and why checkout never waits on a bank gateway.
8. **08-running-it-locally.md** (PDF Version): A practical guide for developers wanting to start the frontend and backend on their local machine.

9. **PITCH_DECK.md** ([PDF Version](#)): Executive investor and administration pitch deck highlighting unit economics, TAM, and rollouts.
10. **V_FOODS_COMPLETE_SYSTEM_GUIDE.md** ([PDF Version](#)): Comprehensive system guide with full architecture diagrams and operational specs.
