V Foods UI/UX Backend Conflicts Log

This log records any user interface requirements or improvements that would ordinarily require backend modifications (such as database columns, new API endpoints, RPC changes, RLS policies, webhook alterations, or server-side calculations). Under the strict frontend-only constraints of this project, none of these backend items are changed; instead, each item is logged here and resolved via a safe frontend presentation layer.

Item	Requested UI Requirement	Backend Dependency / Conflict	Safe Frontend Workaround Applied	Status
None currently logged	All current Phase 0 requirements map cleanly to existing data fields.	None	N/A	Clear
